The performance data shown above represents past performance and is not a guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance data quoted. Please visit www.tweedy.com to obtain performance data which is current to the most recent month end.

† Tweedy, Browne has voluntarily agreed, effective May 22, 2020 through at least July 31, 2024, to waive the International Value Fund's fees whenever the Fund's average daily net assets ("ADNA") exceed \$6 billion. Under the arrangement, the advisory fee payable by the Fund is as follows: 1.25% on the first \$6 billion of the Fund's ADNA; 0.80% on the next \$1 billion of the Fund's ADNA (ADNA over \$6 billion up to \$7 billion); 0.70% on the next \$1 billion of the Fund's ADNA (ADNA over \$7 billion up to \$8 billion); and 0.60% on the remaining amount, if any, of the Fund's ADNA (ADNA over \$8 billion). The performance data shown above would have been lower had fees not been waived during certain periods.

* Tweedy, Browne has voluntarily agreed, effective December 1, 2017 through at least July 31, 2024, to waive a portion of the International Value Fund II's, the Value Fund's and the Worldwide High Dividend Yield Value Fund's investment advisory fees and/or reimburse a portion of each Fund's expenses to the extent necessary to keep each Fund's expense ratio in line with the expense ratio of the International Value Fund. (For purposes of this calculation, each Fund's acquired fund fees and expenses, brokerage costs, interest, taxes and extraordinary expenses are disregarded, and each Fund's expense ratio is rounded to two decimal points.) The net expense ratios set forth above reflect this limitation, while the gross expense ratios do not. The International Value Fund II's, Value Fund's and Worldwide High Dividend Yield Value Fund's performance data shown above would have been lower had fees and expenses not been waived and/or reimbursed during certain periods.

The Funds do not impose any front-end or deferred sales charges. The expense ratios shown above reflect the inclusion of acquired fund fees and expenses (i.e., the fees and expenses attributable to investing cash balances in money market funds) and may differ from those shown in the Funds' financial statements.

COMMENTARY

Sparked by improving inflation data and increasing market optimism around the prospects for interest rate cuts early in 2024, global equity markets gained considerable momentum on the upside in Q4 2023 and finished the year with a “Santa Claus” rally that drove equity valuations materially higher. In the roughly eight-and-a-half-week period between October 27th and year-end, the MSCI EAFE and World Indexes were up approximately 15% and 16%, and finished the full quarter up 10.42% and 11.42%, respectively. In this highly charged, momentum-driven, risk-on environment, the Tweedy, Browne Funds made considerable financial progress, but as one might expect, trailed their benchmark indices, producing returns between 5.71% and 9.41% for the quarter, and between 12.37% and 15.20% for the full calendar year.

PORTFOLIO ATTRIBUTION

Please note that the individual companies discussed herein were held in one or more of the Funds during the quarter ended December 31, 2023, but were not necessarily held in all four of the Funds. Please refer to each Fund’s portfolio page, beginning on page 4, for selected purchase and sale information during the quarter and the notes on page 13 for each Fund’s respective holdings in each of these companies as of December 31, 2023.

With the global economy continuing to hold up rather well in the face of higher interest rates, it was the more economically sensitive components of the Tweedy, Browne Funds’ portfolios that continued to lead the Funds’ returns in the 4th quarter. This included strong results in several of the Funds’ industrial segments, more specifically the Funds’ aerospace & defense, machinery, and chemical holdings, such as Safran, the French aircraft engine and maintenance company; BAE, the UK-based defense contractor; Aalberts, the Dutch industrial conglomerate; Haitian, the China-based manufacturer of plastic injection molding machines; and Trelleborg, the Swedish developer of engineered polymer solutions that seal, damp, and protect critical industrial applications. In addition, companies such as ADEKA, Japan’s leading chemical company; Kemira, the Finnish chemical company that serves customers in water intensive industries; Brenntag, the German-based leader in global chemical distribution (held by each Fund other than the Worldwide High Dividend Yield Value Fund (“Worldwide Fund”)); and SOL SpA, the Italian producer and distributor of industrial gases (held by the International Value Fund and International Value Fund II), were also positive contributors to the quarter’s returns. Other companies producing solid returns for the quarter included Autoliv, the Swedish auto safety company; US banks such as Wells Fargo (held only in the Value Fund), Bank of America (held in the International Value Fund and the International Value Fund II), and Truist; Progressive, the US-based auto insurer (held only in the Worldwide Fund); U-Haul, the US-based moving and storage company (held by the Value Fund, International Value Fund, and International Value Fund II); and beverage-related companies such as Coca-Cola FEMSA and the Canadian juice company, Lassonde (which is not held by the Worldwide Fund). Deutsche Post, the German-based airfreight, parcel delivery, and mail company; Ionis Pharma, a US-based pharmaceutical company (held by the Value Fund, International Value Fund, and International Value Fund II); and Vertex, the US-based biotech company, were also positive contributors for the quarter.

In contrast, several of the Funds’ communication services, healthcare, food, energy and real estate-related holdings produced disappointing returns for the quarter. This included declines in the stock prices of companies such as Baidu, the Chinese internet search provider and Ubisoft, the French video game developer (held by each Fund other than the Worldwide Fund); Dentsu, the Japanese advertising company; Novartis and Roche, the Swiss pharma companies; Fresenius, the German healthcare conglomerate; Nestlé, the Swiss food company; TotalEnergies, the French oil company (not held by the Worldwide Fund); Enterprise Products, the US-based oil & gas pipeline company (held by the Value and Worldwide Funds); and Hang Lung, the Hong Kong real estate development company (held by each Fund other than the Value Fund). In addition, FMC, the US-based crop chemical company; SCOR, the French reinsurer; and Diageo, the UK spirits company, had a difficult quarter in terms of returns.

PORTFOLIO ACTIVITY

Portfolio activity was a bit more muted than in recent quarters. That said, new positions established during the quarter included DB Insurance, the Korean non-life insurance company (established for all but the Worldwide Fund); Hosokawa Micron, the Japan-based industrial process machinery manufacturer; and Nippon Express, the Japanese transport and logistics company (held in the Worldwide Fund). We also added Aalberts, the Dutch engineering company, to the Worldwide Fund (Aalberts was a holding in our other Fund portfolios). All these additions, in our view, were purchased at prices that represent a significant discount from our estimate of their underlying intrinsic values, were financially strong and had attractive runways for potential future growth. Lastly, additions were made to a handful of the Funds' positions including, among others, companies such as FMC, Sealed Air, and Teleperformance (held by each Fund) and U-Haul, Alten, and Brenntag (held in each Fund other than the Worldwide Fund).

On the sell side, several Fund holdings were either eliminated or pared back. The stock prices of these businesses had either reached our estimates of their underlying intrinsic values or had been compromised in some way by virtue of declines in our estimates of their underlying intrinsic values and future growth prospects. Or, they may have been sold or trimmed to make room for new additions or to generate losses, which could be used to offset realized gains. *(A list of selected newly established positions, including additions, sales, and trims of existing positions for each Fund is included with each Fund's portfolio page, beginning on page 4 hereof.)*

PORTFOLIO POSITIONING AND OUTLOOK

While market indexes rebounded rather aggressively during the quarter and for the full year, the advance was quite narrow in certain markets, particularly in the US where the bulk of the return of the S&P 500 was produced by a handful of tech-related companies known as the "Magnificent 7." Aside from this group, the average company did not perform nearly as well. Non-US equity markets, as represented by the MSCI EAFE Index, had broader participation, and performed quite well and have slowly been gaining ground on US equity markets. We are encouraged by this improvement in the performance of international equities and have continued to uncover new opportunities at home and abroad, particularly in smaller and medium capitalization industrial companies. The Japanese component of our Fund portfolios has also been increasing over the last couple of years as real change seems to be afoot in Japan. The investment focus across all of our Funds has been largely on companies meeting the Funds' investment criteria that we believe have competitive moats, pricing power, and strong balance sheets, and/or where knowledgeable insiders have been purchasing shares at or around prices we feel represent attractive value. We still believe we are in the midst of a material shift in markets largely driven by stubbornly persistent inflation and interest rates, which we think will likely normalize over time at levels well beyond the zero bound of the last decade plus. As we have contended in numerous commentaries over the last couple of years, in such an environment, we believe price matters again, and we are highly optimistic about the future for price-sensitive strategies like ours.

Thank you for investing with us.

Roger R. de Bree, Andrew Ewert, Frank H. Hawrylak, Jay Hill,

Total Annual Fund Operating Expense Ratios†* as of 03/31/2023: 1.40% (gross), 1.40% (net)

The performance shown above represents past performance and is not a guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Please visit www.tweedy.com to obtain performance data which is current to the most recent month end.

† Tweedy, Browne has voluntarily agreed, through at least July 31, 2024, to waive a portion of the Fund's investment advisory fees and/or reimburse a portion of the Fund's expenses to the extent necessary to keep the Fund's expense ratio in line with the expense ratio of the International Value Fund. (For purposes of this calculation, each Fund's acquired fund fees and expenses, brokerage costs, interest, taxes and extraordinary expenses are disregarded, and each Fund's expense ratio is rounded to two decimal points.) Please refer to the Fund's prospectus for additional information on the Fund's expenses. The Fund's performance would have been lower had certain fees and expenses not been waived and/or reimbursed during certain periods.

*** The Fund does not impose any front-end or deferred sales charges. The expense ratios shown above reflect the inclusion of acquired fund fees and expenses (i.e., the fees and expenses attributable to investing cash balances in money market funds) and may differ from those shown in the Fund's financial statements.**

Please refer to footnotes (1) through (7) at the end of this commentary for descriptions of the Fund's indexes.

Total Annual Fund Operating Expense Ratios as of 03/31/2023: 1.49% (gross), 1.39% (net)^{†*}
30-Day Standardized Yield as of 12/31/2023: 2.25% (Subsidized); 2.17% (Unsubsidized)

The performance shown above represents past performance and is not a guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Please visit www.tweedy.com to obtain performance data which is current to the most recent month end.

[†] Tweedy, Browne has voluntarily agreed, through at least July 31, 2024, to waive a portion of the Fund's investment advisory fees and/or reimburse a portion of the Fund's expenses to the extent necessary to keep the Fund's expense ratio in line with the expense ratio of the International Value Fund. (For purposes of this calculation, each Fund's acquired fund fees and expenses, brokerage costs, interest, taxes and extraordinary expenses are disregarded, and each Fund's expense ratio is rounded to two decimal points.) Please refer to the Fund's prospectus for additional information on the Fund's expenses. The Fund's performance would have been lower had certain fees and expenses not been waived and/or reimbursed during certain periods.

*** The Fund does not impose any front-end or deferred sales charges. The expense ratios shown above reflect the inclusion of acquired fund fees and expenses (i.e., the fees and expenses attributable to investing cash balances in money market funds) and may differ from those shown in the Fund's financial statements.**

Please refer to footnotes (1) through (7) at the end of this commentary for descriptions of the Fund's indexes.

NOTES

(1) Indexes are unmanaged, and the figures for the indexes shown include reinvestment of dividends and capital gains distributions and do not reflect any fees or expenses. Investors cannot invest directly in an index.

(2) The **MSCI EAFE Index** is a free float-adjusted, market capitalization weighted index that is designed to measure the equity market performance of developed markets, excluding the US and Canada. The **MSCI EAFE Index (in USD)** reflects the return of the MSCI EAFE Index for a US dollar investor. The **MSCI EAFE Index (Hedged to USD)** consists of the results of the MSCI EAFE Index hedged 100% back into US dollars and accounts for interest rate differentials in forward currency exchange rates. Results for each index are inclusive of dividends and net of foreign withholding taxes.

(3) Inception dates for the International Value Fund, International Value Fund II, Value Fund and Worldwide High Dividend Yield Value Fund are June 15, 1993, October 26, 2009, December 8, 1993, and September 5, 2007, respectively. Prior to 2004, information with respect to the MSCI EAFE and MSCI World Indexes used was available at month end only; therefore, the since-inception performance of the MSCI EAFE Indexes quoted for the International Value Fund reflects performance from May 31, 1993, the closest month end to the International Value Fund's inception date, and the since inception performance of the MSCI World Index quoted for the Value Fund reflects performance from November 30, 1993, the closest month end to the Value Fund's inception date. For International Value Fund, information with respect to the Morningstar Foreign Stock Fund Average or the Foreign Stock Fund Average (see note 6 below) are available at month end only; therefore, the closest month end to the inception date of the International Value Fund, May 31, 1993, was used.

(4) The **S&P 500/MSCI World Index (Hedged to USD)** is a combination of the S&P 500 Index and the MSCI World Index (Hedged to USD), linked together by Tweedy, Browne, and represents the performance of the S&P 500 Index for the periods 12/08/93 – 12/31/06 and the performance of the MSCI World Index (Hedged to USD) beginning 01/01/07 and thereafter (beginning December 2006, the Fund was permitted to invest more significantly in non-US securities). The **S&P 500 Index** is a market capitalization weighted index composed of 500 widely held common stocks that assumes the reinvestment of dividends. The index is generally considered representative of US large capitalization stocks.

(5) The **MSCI World Index** is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets. The **MSCI World Index (in USD)** reflects the return of this index for a US dollar investor. The **MSCI World Index (Hedged to USD)** consists of the results of the MSCI World Index with its foreign currency exposure hedged 100% back into US dollars. The index accounts for interest rate differentials in forward currency exchange rates. The **MSCI World High Dividend Yield Index** reflects the performance of equities in the MSCI World Index (excluding REITs) with higher dividend income and quality characteristics than average dividend yields that are both sustainable and persistent. The index also applies quality screens and reviews 12-month past performance to omit stocks with potentially deteriorating fundamentals that could force them to cut or reduce dividends. The **MSCI World High Dividend Yield Index (in USD)** reflects the return of the MSCI World High Dividend Yield Index for a US dollar investor. Results for each index are inclusive of dividends and net of foreign withholding taxes.

(6) Since September 30, 2003, the **Foreign Stock Fund Average** is calculated by Tweedy, Browne based on data provided by Morningstar and reflects average returns or portfolio turnover rates of all mutual funds in the Morningstar Foreign Large-Value, Foreign Large-Blend, Foreign Large-Growth, Foreign Small/Mid-Value, Foreign Small/Mid-Blend, and Foreign Small/Mid-Growth categories. Funds in these categories typically invest in international stocks and devote no more than 20% of assets to US equity markets. These funds may or may not be hedged to the US dollar, which will affect reported returns. References to "Foreign Stock Funds" or the "Foreign Stock Fund Average" that predate September 30, 2003 are references to Morningstar's Foreign Stock Funds and Foreign Stock Fund Average, respectively, while references to Foreign Stock Funds and the Foreign Stock Fund Average for the period beginning September 30, 2003 refer to Foreign Stock Funds and the Foreign Stock Fund Average as calculated by Tweedy, Browne.

(7) Since April 28, 2017, the **Global Stock Fund Average** is calculated by Tweedy, Browne based on data provided by Morningstar, and reflects average returns or portfolio turnover rates of all mutual funds in the Morningstar Global Large Stock (including Global Large Value, Global Large Growth, and Global Large Blend categories) and Global Small/Mid Stock categories. Prior to April 28, 2017, the Global Stock Fund Average was calculated by Morningstar. Funds in these categories typically invest in stocks throughout the world while maintaining a percentage of their assets (normally 20% - 60%) invested in US stocks. These funds may or may not be hedged to the US dollar, which will affect reported returns. References to "Global Stock Funds" or the "Global Stock Fund Average" that predate April 28, 2017 are references to Morningstar's Global Stock Funds and Global Stock Fund Average, respectively, while references to Global Stock Funds and the Global Stock Fund Average for the period beginning April 28, 2018 refer to the Global Stock Funds and Global Stock Fund Average as calculated by Tweedy, Browne.

The Funds are actively managed, unlike the indexes, and consist of securities that vary widely from those included in the indexes in terms of portfolio composition, country and sector allocations, and other metrics. Hedged indexes are included to illustrate how the stocks that are components of the hedged indexes would have performed in their local currencies for a US dollar investor. The hedged indexes are fully nominally hedged on a monthly basis, whereas the International Value Fund and the Value Fund hedge their perceived currency exposure only where practicable. Tweedy, Browne applies a different hedging methodology than the hedged indexes. Index results are shown for illustrative purposes only.

The performance results reflected above are over the course of many years and reflect multiple market cycles and varying geopolitical, market and economic conditions. Past performance is no guarantee of future results.

BAE Systems	3.9%	2.8%	1.7%	3.2%
Baidu	1.1%	1.0%	0.8%	0.0%

The above listed portfolio holdings reflect the Funds' investments on the date indicated and may not be representative of the Funds' current or future holdings. Selected Purchases & Sales illustrate some or all of the largest purchases and sales made for each Fund during the preceding quarter and may not include all purchases and sales. Some "undisclosed" names may have been withheld where disclosure may be disadvantageous to a Fund's accumulation or disposition program.

Current and future portfolio holdings are subject to risk. The securities of small, less well-known companies may be more volatile than those of larger companies. In addition, investing in foreign securities involves additional risks beyond the risks of investing in securities of US markets. These risks which are more pronounced in emerging markets, include economic and political considerations not typically found in US markets, including currency fluctuation, political uncertainty and different financial standards, regulatory environments, and overall market and economic factors in the countries. Force majeure events such as pandemics and natural disasters are likely to increase the risks inherent in investments and could have a broad negative impact on the world economy and business activity in general. Value investing involves the risk that the market will not recognize a security's intrinsic value for a long time, or that a security thought to be undervalued may in fact be appropriately priced when purchased. Dividends are not guaranteed, and a company currently paying dividends may cease paying dividends at any time. Diversification does not guarantee a profit or protect against a loss in declining markets.

Although the practice of hedging perceived foreign currency exposure, where practicable, utilized by the International Value Fund and Value Fund reduces the risk of loss from exchange rate movements, it also reduces the ability of the Funds to gain from favorable exchange rate movements when the US dollar declines against the currencies in which the Funds' investments are denominated and may impose costs on the Funds. As a result of practical considerations, fluctuations in a security's prices, and fluctuations in currencies, a Fund's hedges are expected to approximate, but will generally not equal, the Fund's perceived foreign currency risk.

Stocks and bonds are subject to different risks. In general, stocks are subject to greater price fluctuations and volatility than bonds and can decline significantly in value in response to adverse issuer, political, regulatory, market or economic developments. Unlike stocks, if held to maturity, bonds generally offer to pay both a fixed rate of return and a fixed principal value. Bonds are subject to interest rate risk (as interest rates rise bond prices generally fall), the risk of issuer default, issuer credit risk, and inflation risk, although US Treasuries are backed by the full faith and credit of the US government.

Investors should refer to the prospectus for a description of risk factors associated with investments in securities which may be held by the Funds. Investing involves the risk of loss, including the loss of principal. There is no assurance that a Fund will achieve its investment objective.
